**Course Description.** Modern computing systems are frequently hosted on the cloud. That is, they are inherently distributed systems. To appropriately build and deploy these systems developers should know not only about development tools such as container management tools but also the structure of the cloud – in particular how it utilizes virtual machines, containers, and networks. They should also understand security mechanisms both in the internet and how to authorize users and maintain credentials securely. Finally, to protect the system once it is placed into production, a developer needs to know how to enable the detection of problems during execution through the collection and navigation of logs produced by the system. These are the topics covered by this course.

**Activities.:** The activities you will do for the course are:

Prior to each class session.

1. Watch the videos as enumerated below.
2. Read the sections of the textbook and additional references as enumerated below
3. Create a question for class discussion
4. Post a mind map of the contents of the video

During each class session

1. Take a short quiz over the preceding day's videos, readings, and discussion.
2. Participate in a discussion over the material in that day's video and reading.
3. Participate in other discussions and breakout groups as assigned during the class.

**Prior Knowledge.** Although no specific programming knowledge is required, you should know several programming languages and several operating systems. You should not be intimidated about navigating the internet to find information about specific tools, their installation, and their use.

**Learning Objectives.** After completing this course, you will be able to:

- Explain the basic concepts of distributed systems including security.
- Understand how to manage credentials in a secure fashion.
- Understand Virtual Machines and Containers and their use in the cloud.
- Understand the Cloud and how to use the cloud for applications.
- Gain some familiarity with container-based development tools.
- Navigate the internet to learn about tool installation and use.

**Learning Resources.** There is a textbook required for this course. The details are:

**Title: Deployment and Operations for Software Engineers**

**Authors: Len Bass and John Klein**

Software engineering practices require knowledge of the environment in which an application is to be run. In the modern world, this means knowledge of virtualization, containers, networking, the cloud, and security techniques for the internet. A developer should also know about microservices, configuration management, the deployment pipeline, monitoring and post production, disaster recovery, and how to develop secure applications. These topics, and more, are all covered in this book. The book includes exercises and discussion questions to facilitate classroom or group learning.. [Order it from Amazon.](#)

**Assignments and due dates. Available on Canvas**

**Assignment 1:** VM/Container and DNS, *Due on: Sep 18<sup>th</sup>*

**Assignment 2:** Containers and Networking, *Due on: Sept 27<sup>th</sup>*

**Assignment 3:** SSH, *Due on: Oct 11<sup>th</sup>*

Each assignment has three portions.

- Fulfilling the assignment by performing the specified actions and code/scripts (60%)
- Enumerating the steps required to perform the specified actions. This enumeration should be usable by someone unfamiliar with the actions and Screen shots of each key steps (20%)
- A one or two paragraph reflection describing the most serious problem you ran into while performing the assignment and how you got around the problem.

**Assessments.**

- **Assessment 1,** Daily quizzes:
- **Assessment 2,** Comprehensive final (given last day of classes).
- **Assessment 3,** Assignments:

- **Class participation**, remaining until the end of class, posting questions as described above, participating in class discussions.

Assessment	Final Grade %	Grade	Percentage Interval
Daily quizzes	20%	A	90-100%
Final	30%	B	80-89%
Assignments	40%	C	70-79%
Class participation	10%	D	60-69%
		R (F)	59% or below

### Course and Grading Policies

- **Late-work policy:** All work is expected to be handed in at the indicated due date and time. For fairness to the whole class, no late submissions will be accepted for the group work. In the first week of classes, you should receive a course schedule for each course; please use them to plan ahead.

Each student is allowed one late submission for the individual homework assignments. You should immediately notify the course TA(s) before the submission deadline that you will submit late. Late work must be submitted as soon as circumstances allow, ordinarily within 24 hours of the due date. If you have any questions you should raise them immediately rather than waiting for conflicts to arise.

- **Participation policy.** Class participation will be graded by in-class engagement, including asking relevant questions based on a critical review of required readings, lectures, and comments made by your peers. The lack of attendance, and the use of mobile devices, including phones and laptops, will count against your participation grade.

**Course Schedule.** The following schedule provides a general overview of topics. Please refer to the syllabus online in Canvas for specific lecture topics, reading assignments.

Class date	Topic and video	Readings
Mon, Aug 26	Intro and Course Objectives/Logistics	Textbook: Chap 1 -Platform Preliminaries
Wed, Aug 28	Virtualization and Container	Textbook: Chap 2 -Virtualization
Mon, Sept 2	No class - Labor Day	
Wed, Sept 4	Networking 1	Textbook: Chap 3 -Networking
Mon, Sept 9	Networking 2	Textbook: Chap 3 -Networking
Wed, Sept 11	Cloud 1	Textbook: Chap 4 - The Cloud
Mon, Sept 16	Cloud 2	Textbook: Chap 4 - The Cloud
Wed, Sept 18	Container Management	Textbook Chap 5 – Container Orchestration
Mon, Sept 23	Measurement	Textbook: Chap 6 - Measurement
Wed, Sept 25	Infrastructure security 1	Textbook: Chap 7 – Infrastructure Security
Mon, Sept 30	Infrastructure security 2	Textbook: Chap 7 – Infrastructure Security
Wed, Oct 2	Credential management	Textbook: Chap 14 –Secure Development
Mon, Oct 7	Vulnerabilities and patch management	Textbook: Chap 14 – Secure Development
Wed, Oct 9	Comprehensive final	

**Accommodations for Students Disabilities.** If you have a disability and have an accommodations letter form the Disability Resources office, I encourage you to discuss your accommodations and needs with me as early in the semester as possible. I will work with you to ensure that accommodations are provided as appropriate. If you suspect that you may have a disability and would benefit from accommodations but are not yet registered with the Office of Disability Resources, I encourage you to contact them at [access@andrew.cmu.edu](mailto:access@andrew.cmu.edu).

**Academic Integrity.** Honesty and transparency are important to good scholarship. Plagiarism and cheating, however, are serious academic offenses with serious consequences. If you are discovered engaging in either behavior in this course, you will earn a failing grade on the assignment in question, and further disciplinary action may be taken.

For a clear description of what counts as plagiarism, cheating, and/or the use of unauthorized sources, please see the [University's Policy on Academic Integrity](#).

If you have any questions regarding plagiarism or cheating, please ask me as soon as possible to avoid any misunderstandings. For more information about Carnegie Mellon's standards with respect to academic integrity, you can also check out the [Office of Community Standards & Integrity](#) website.

**Utilizing Generative AI:** We expect that all work students submit for this course will be their own. We have carefully designed all assignments and class activities to support your learning. Doing your own work, without human or artificial intelligence assistance, is best for your achievement of the learning objectives in this course. In instances when collaborative work is assigned, We expect for the submitted work to list all team members who participated. We specifically forbid the use of ChatGPT or any other generative artificial intelligence (AI) tools at all stages of the work process, including brainstorming. Deviations from these guidelines will be considered violations of [CMU's academic integrity policy](#). Note that expectations for "plagiarism, cheating, and acceptable assistance" on student work may vary across your courses and instructors. Please ask me if you have questions regarding what is permissible and not for a particular course or assignment.

**Student Wellness.** As a student, you may experience a range of challenges that can interfere with learning, such as strained relationships, increased anxiety, substance use, feeling down, difficulty concentrating and/or lack of motivation. These mental health concerns or stressful events may diminish your academic performance and/or reduce your ability to participate in daily activities. CMU services are available, and treatment does work. You can learn more about confidential mental health services available on campus at the [Counseling and Psychological Services](#) website. Support is always available (24/7) from Counseling and Psychological Services: 412-268-2922.

**Respect for Diversity.** It is my intent that students from all diverse backgrounds and perspective be well served by this course, that students' learning needs be addressed both in and out of class, and that the diversity that students bring to this class be viewed as a resource, strength, and benefit. It is my intent to present materials and activities that are respectful of diversity: gender, sexuality, disability, age, socioeconomic status, ethnicity, race, and culture. Your suggestions are encouraged and appreciated. Please let me know if any of our class meetings conflict with your religious observations so that I can make alternate arrangements for you.
